Solids Control Solutions

**BENEFITS**

- Increased ROP
- Less wear on tools, pump pistons, pump liners
- Reduced torque and drag
- Lower dilution rates
- Reduced chemical/additive costs
- Superior hole cleaning
- Improved hydraulics
- Better ECD control
- Environmental stewardship

**Reliable, customizable, and effective solids control solutions**

Delivering effective solids control solutions that are flexible, cost-effective, and customized with consistent, reliable outcomes are of the highest importance. Partnering with Anchor USA, you rely on a seasoned partner with experienced field and site supervisors, along with operating technicians with solids control experience ensuring a seamless, reliable operation. We deliver services using skid-mounted equipment suitable for traditional operations or using mobile processing units that can provide on-demand service.

Solids control is sometimes taken for granted, but in fact the quality and efficiency of solids control equipment makes a positive difference in fluid performance and cost by ensuring drilling fluid remains in good condition. Proper solids control maintains required fluid densities, wellbore integrity and minimizes low gravity solids content.

Anchor USA offers a range of equipment and solutions, built and serviced by the industry’s top manufacturers. These, along with specialty equipment such as Mobile Drying Units (MDUs), Mobile Centrifuge Units (MCUs), and MUDSTRIPPER, enhance both flexibility and performance of solids control operations.
Total Backyard Management (TBM)

Rig backyard operations are often split between multiple service providers, where communication and coordination are limited, leading to inefficient operations. Anchor USA’s Total Backyard Management solution provides a single point of accountability and management for the rig backyard by consolidating solids control and waste management, resulting in maximum return on investment for our customers. Along with coordination and management of equipment, third-party services, and haul-off and disposal services, Anchor USA provides customers with detailed data collection, reporting, and analysis for process optimization.

Equipment Offerings:
- Shale Shakers
- Replacement Shaker Screens
- Centrifuge Systems (skid and mobile units)
- MUDSTRIPPER™
- Dewatering Units
- Mud Vacuum Systems - 30hp to 100hp
- Waste Water Treatment & Recycling
- Drill Cuttings Drying & Fluids Recovery (skid and mobile units)

We Deliver, No Excuses
